

Masks and Omicron Variant

The Safety of Our People and Our Customers is our first consideration.

To help keep Our People informed, Discount Tire would like to provide an update regarding the use of masks and the current COVID-19 Omicron variant.

- It has been determined that the Omicron variant spreads more quickly than other known coronavirus variants and is extremely contagious.
- Experts recommend using KN95 or N95 masks, which offer more protection against the highly transmissible variant.
- Recent studies have shown that utilizing cloth masks or surgical masks alone are **NOT** as effective in preventing the spread of the Omicron variant.
- During the outbreak of the Omicron variant, KN95 masks will be available for Our People to order if they prefer to wear this type of facial covering.
- If an employee chooses this type of facial covering, it is **recommended that it be changed once daily or if it becomes soiled/wet.**

If you have any questions, please submit via the Questions and Feedback button on the [Coronavirus](#) page.

Please take care of yourself and each other!
