

DC – Banding Tires

Purpose The purpose of banding is to reduce shipping costs. It is imperative this best practice is followed so that bands do not break and our customer receives their product on time and as ordered.

Guidelines

- Safety glasses must be worn while banding.
- Flip all white wall tires so they are facing each other.
- Do not band tires that reach or exceed 70 lbs. in total.

Banding Tires Follow these steps below in order to accurately band all tires:

Step	Action
1	<p>Inspect package to verify if it is banded or not.</p> <p>A banded package will have the same tracking on both tires that are stacked on each other.</p>
2	<p>Band package in a Y shaped formation with 3 bands evenly spaced.</p> 
3	<p>Do not cover any barcodes with band.</p> <p>See Packaging BP for special instruction regarding hardware and other unique applications.</p>
4	<p>Verify if the package is UPS or FEDEX and send to the correct truck.</p>
