**Due date is July 14th**

## Safety Focus - Ladder Safety (2)

**Ladder related injuries are preventable!** Follow the steps outlined in this Safety Focus to inspect your ladders and show your people how, when and where to safely use a ladder.

During our morning huddle we discussed how to properly use and inspect the ladder. We also discussed how to prevent injuries by not climbing on racks, standing on tires, and jumping to reach. During the inspection I found the QRG reference was missing from the ladder so we have ordered one. I observed the crew chief pulling inventory and they are using safe behaviors.

07/06/2017

Ladder Safety(1) Tell us about how you shared the information in this Safety Focus and what you found during your inspection and observation.

As a group we went over the importance of having the correct ladders in the store. We spoke about when to use them and where to find the ladders stored at. Covered why we use ladders correctly to keep everyone safe. We went over how to do a ladder inspection properly and what to look for when doing so. And finally what can happen when we don't use ladders correctly.

07/07/2017

**Ladder Safety:**

-We updated our ladder safety in April of this year so all the correct labels are currently on the ladders. I have spoken with most of the crew in our morning huddles just so they are all aware of where the ladders are located in the store. I also asked questions about what they thought were improper uses of the ladders.

Ladder Safety....

**NCC10**

After looking at our ladders in the store, I found that we have 1 step ladder and 1 platform ladder. Both are in good working condition, however, the QRG's have fallen off. I went ahead and order 1 POP for each and it will be here on Monday, July 10th. I have shared the information with our team, and it seems more important at our store because we have a lot of "fun sized" or "vertically challenged" people such as myself. We want to make sure we are staying safe when pulling product because I dont want anything falling on one of our peoples heads!

**Ladder Safety**

1. My team and I got together to inspect our step ladders. We talked about store awareness with the proper use of the ladders and made sure that everyone not only themselves use it correctly but hold everyone else accountable for the proper use as well.

07/10/2017

**Ladder Safety**

Firstly, the Safety Leader has to inspect the ladder to familiarize himself with it before explaining its proper uses. the information is shared within our morning huddle. The information that is shared with the team consist of how to properly set up the ladder to ensure stability, make sure that ladder does not exceed that weight limit and lastly inspect the ladder to make sure that there is no damage.

We have an odd store. Our racks are not tall with exception to our unloading area. We have used our ladders there and it is very helpful. We have had guys do the rack climbing through my observation. I went over the hazards of this and shown the proper use of the ladders with all our staff. We did have 1 of the QRG missing from one ladder. IT is now on order and we went over checking the ladder itself for safety.

Had a discussion with guys about not climbing racks.  
Standing on stacks and or jumping to get something..  
If its higher than your head then make sure to use a  
ladder

Thank you  
Andrey Kvotchenko

As a group we look at potential ladder failures. We also  
discussed what to do if a potential problem was found  
with this equipment. our talk  
involved potential hazards from ,standing on tires,  
climbing on racks and jumping up or letting product  
fall to the floor. When the QRG is received we will be  
attaching them to the correct ladder.

Being a new store makes it nice. We have two standard ladders and two platform ladders. We did a quick inspection on ALL ladders and made sure all QRG were still attached and haven't fallen off yet. Everything is in great working order. Discussed during safety huddle about when to use each type of ladder and does/don'ts during pulling inventory to keep our people safe(No climbing, No standing on tires, No jumping). Also discussed ladder location placement to make sure everyone knows location and it's in a central locations to keep workflow steps at minimal.
