Damage Includes:

- Damage to studs and/or hubs
- Wheel damage
- Jack or lift-related damage
- Air suspension damage
- Accident pulling into/out of bay

SAFETY LEADER SPOTLIGHT | OUR CULTURE

Safety Leader Expectations

Last month, we asked you to demonstrate safe lifting techniques in the morning huddle. Below are a few responses from your peers:

“ The way we lift things is instilled into the guys since day 1 to create a habit. They do a great job at reducing injuries from the workplace. The way we sustain is to hold everyone accountable "see something say something". ”

“ The safe lifting demonstration went awesome, each tech wanted to demonstrate it to each other. Yes, it will definitely improve and keep my guys from having any injuries from improper lifting. I plan on observing my people at least once a week ”

“ Our lifting observation went really well, not many guys put much thought into lifting at the dunk tank, but knew about lifting onto the changers. We took the time to acknowledge how rushing could cause problems with our backs not lifting properly. ”

“ The biggest change was the speed in which we picked up...as our people demonstrated proper body mechanics, the better the body positioning was. ”

“ Biggest area was my team was lifting the tires wrong not with there knees, they were coached on the proper movements and was observed doing it correctly ”

“ Demonstration was done in a morning meet. Had my workflow show the right way to lift. Doing the observations we were at a 70%. After the demonstration I am noticing better lifting techniques . Our hardest part of best practice lifting techniques is around our dunk tank. Its a small area and is hard lift an assembly. 360 awareness is how we are going to sustain. ”

“ After watching the team lift safely, we found a huge area to improve in when it comes to lifting on the changer when it requires 2 people and using the balancer. We will continue to coach and train on lifting while using our SC and workflow manager to observe when not present and help all employees as need. ”

CONTEST WINNERS – OCTOBER

SAFETY & QUALITY FOCUSED VIDEO CONTEST

Juan Marin
