

# IMMEDIATE ACTION SUPPORT

## Hammer Hazard

November 30, 2015

### What and Why

Metal-head hammers in the stores may present a hazard. The “Removing the Assembly” best practice has been updated for removing wheel locks when the key is not available. Therefore, a specific metal-head hammer has been approved for this task.

### Action

\*Approved metal-head hammers along with safety goggles will be delivered to the Regional Warehouse in boxes marked for each store.

\* Also, each Store Manager has collected all metal-head hammers “non-approved” for store use.

#### ***Warehouse Adjustment Manager or Maintenance Manager:***

- Visit each store in the region.
- Drop off the respective box of hammers and goggles (Ensure boxes are delivered to each store).
- Pick up the “non-approved” hammers collected by the store manager and deliver them to the Regional Warehouse.
- Dispose of the “non-approved” hammers in a manner appropriate with local disposal regulations.

\*(DO NOT SELL OR DONATE the “non-approved” hammers)

### Final Step

Please complete the following [Hammer Hazard Support Survey](#) after each store

***Thank you for keeping our people Safe!***
