

Replacing Lug Nuts/Bolts

Ensure the safety of Our Customers through the replacement of worn and/or damaged lugs.

CRITICAL TO
QUALITY

We recommend replacement of lug nuts/bolts if the following conditions are found:

- Damaged lug(s)
- Missing lug(s)
- Swollen lug nuts (happy caps) that require half-size sockets to remove

- Wheel locks that are prone to strip during removal

The Whys

- Over time, lug nuts can become worn and unable to be removed using the manufacturer provided equipment. This can leave a customer stranded on the side of the road with a flat tire and no way to remove the assembly from the vehicle.
