

Beadlocks – What We Service/Sell

CRITICAL TO SAFETY

		AIRCHECK	ROTO/BALANCE	BREAK REAR BEAD	MOUNT/DISMOUNT	SELL
BEADLOCKS	Carry In/Out	✓	✓	✓	✗	✓
	Trailer In	✓	✓	✗	✗	✗
	Driven In	✓	✓	✗	✗	✗

Note: Icon InnerLock wheels are not considered a beadlock wheel as they are DOT approved and one-piece. For more information, see the [Installing Icon Innerlock Wheels QRG](#).

The Whys

- We are able to break the rear bead of a beadlock wheel because the rear bead is simply a normal bead hump that is serviceable with our changers.
- We are not able to mount/dismount beadlock wheels because the front flange of the wheel is a separate piece which must be bolted on to the rest of the wheel in a very specific way. If damaged or installed improperly, it can potentially fail during the inflation process, creating a dangerous projectile.
- Because we cannot completely mount or dismount tires on beadlock wheels, we are not able to complete the work necessary to place the vehicle in a drivable or trailer ready condition before the customer leaves the store.
