Vision Wheel has formulated the newest paint technology to withstand the harshest chemicals used on the roads in the winter. Standard warranty for paint is one year from date of purchase and does not cover corrosion. Vision Wheel believes these winter wheels are best in class. Vision is offering a 2 year warranty for the finish, including corrosion and a lifetime structural warranty.

The problem is...

1 - Brines / De-icing chemicals used on roadways can attack areas of the wheel that have been exposed due to road rash or curbing.

The exposed steel or aluminum will corrode leading to...

- A. Safety Concerns: Loss of tire pressure caused by corrosion-induced rim leaks can lead to dangerous under-inflation.
- B. Cosmetic: Paint / Chrome Peeling or Flaking.

Solution:

Paint specifically formulated and tested to resist corrosion.

How do we know?

Extensive testing was performed.

- Test protocol used was SAE J2334 accelerated weathering test equal to 3.75 years in the most harsh weather in North America, utilizing the most caustic de-icing agents used on the road today.
